Portfolio Content Replacement Brief for Claude

Content source + implementation brief for portfolio updates

Instructions for Claude — read before editing

Update the existing portfolio using the content in this document. The current site already has a distinctive visual style: dark charcoal backgrounds, ivory graph-paper cards, burnt-orange accents, cyan details, handwritten annotations, serif headlines, floating navigation, small decorative icons, and scrapbook/notebook elements.

Non-negotiable requirements

1. **Preserve the existing design and functionality.** Do not rebuild the site from scratch or replace the visual identity with a generic portfolio template.
2. Replace placeholder text with the real content below, matching each item to the corresponding existing section.
3. Keep the tone natural, specific, and student-authentic. Avoid corporate clichés such as “visionary technologist,” “passionate innovator,” “revolutionizing the future,” or exaggerated claims.
4. Do not invent achievements, project status, metrics, user counts, awards, links, publications, clients, or technical experience.
5. Clearly distinguish implemented features from planned/in-development features. If the codebase shows a feature is not implemented, describe it as planned or in development.
6. Do not claim that Diya personally built a whole platform unless her actual contribution is clear. For MentorEdge and group events, describe her contribution accurately.
7. Remove every unfinished placeholder such as `[PROJECT NAME]`, `[PROJECT IMAGE]`, `[YOUR COLLEGE]`, `[YOUR CITY]`, `[YOUR GITHUB]`, `[ORG / CLUB]`, `add in site.config`, `■ add`, and `202X`. Never invent missing contact details.
8. For unknown email, GitHub, LinkedIn, deployed URLs, dates, or exact contribution details, keep a clear configuration value or leave the link disabled rather than fabricating information. Prefer the existing `site.config` or equivalent configuration mechanism if one exists.
9. Use genuine project screenshots and genuine design work already available in the repository when possible. Do not use fabricated project screenshots. If an image is missing, use a clean, intentional placeholder that says what image is needed, not a fake interface presented as real.
10. Check responsive behavior, navigation anchors, accessible labels, image alt text, and all existing interactions after editing. Keep animations subtle and respect reduced-motion preferences.
11. Keep the site copy concise enough to fit the existing layout. You may lightly shorten text to fit, but preserve the facts and meaning.
12. After making changes, report which files changed, which placeholders remain (ideally none), what contact details still need to be supplied, and whether any project content was marked “in development.”

Facts and boundaries

- Name: Diya Gupta.
- Current academic context: B.Tech Computer Science and Engineering student at Manipal Institute of Technology, Bengaluru.
- Current stage: student; do not present her as an established or senior software engineer.
- Interests: software development, AI, graphic design, UI/design, and building practical projects.
- Leadership: President of the college SDG Club; Event Coordinator for CryptNite 2026.

- Projects discussed: Her Saathi, StudyOS, and MentorEdge.
- Her Saathi and StudyOS have been discussed as ongoing projects. Confirm actual implementation from the repository before calling them complete.
- MentorEdge: previous work includes concept/branding and launch-related material; do not assume Diya personally implemented the entire platform.
- CryptNite 2026: cybersecurity Capture The Flag event associated with MIT Bengaluru SDG Club. Prize pool discussed: ■1,00,000. Team size discussed: 3–4. Event had online qualifiers and an on-campus final. Do not add unverified participant counts or outcomes.
- Creative work: Diya enjoys art and graphic design and has worked on college-event and promotional materials. Use only actual work found in the repository or supplied by Diya.
- Research interests previously discussed: decentralized identity using verifiable credentials and cryptography; threat validation using blockchain. Do not describe these as published papers unless verified.
- Do not include personal contact details unless already provided in the project configuration or public profile data in the repository.

SECTION 01 — HERO / HOME

Name

Diya Gupta ✦

Role label

COMPUTER SCIENCE STUDENT · DEVELOPER · DESIGNER

Main headline

I like building things that solve real problems.

Highlight “real problems” using the existing handwritten orange accent style if that matches the current implementation.

Intro paragraph

I'm a computer science student at Manipal Institute of Technology, Bengaluru. I build software, experiment with AI, and spend an unreasonable amount of time thinking about how things should look and work. I'm usually working on a project, learning something new, or sketching out the next idea.

Location

Bengaluru, India · GMT +5:30

Use the location only if the site currently displays it and Diya is happy to show it publicly.

Optional handwritten annotation

ideas → sketches → working projects

SECTION 02 — ABOUT ME

Section label

01 — A LITTLE ABOUT ME

Handwritten intro

hi, I'm Diya ■

Main heading

I study computer science, but I don't want to stop at writing code.

Body copy

I'm pursuing B.Tech in Computer Science and Engineering at Manipal Institute of Technology, Bengaluru.

I enjoy working on projects that combine software, AI, and practical problem-solving. I've explored ideas ranging from a women's safety platform to an AI-powered study workspace, and I also enjoy the visual side of building things — from interfaces to posters and graphic design.

Outside my own projects, I spend time organizing technical events and working with teams through my college's SDG Club.

I'm still figuring things out, trying things I'm not yet good at, and learning by building along the way.

Short detail list

- College: Manipal Institute of Technology, Bengaluru
- Degree: B.Tech — Computer Science and Engineering
- Interests: Software Development · AI · UI/UX · Graphic Design
- Currently: Building projects and exploring new technologies

Photo caption options

Preferred: Diya — occasionally offline

Alternative: diya, outside the terminal ✦

Use Diya's real photo already supplied or present in the project. Do not substitute a generated person.

SECTION 03 — PERSONALITY / NOTEBOOK CARDS

Main heading

I turn complicated ideas into things people can actually use.

Left note heading

I'm a computer science student, but I'm also…

- A designer who notices the small details.
- Someone who enjoys turning ideas into projects.
- A problem-solver who likes figuring things out.
- A team leader who enjoys organizing people around an idea.
- An artist who needs a creative outlet outside code.

Code window content

```
const diya = {
studying: "Computer Science",
building: ["Her Saathi", "StudyOS"],
interests: ["AI", "Development", "Design"],
learning: "Always",
motto: "Make it, test it, improve it."
};
```

Card: What gives me energy

- Building something with a team.
- Seeing an idea become a working project.
- Designing something from a blank canvas.
- Working on technology that could be useful to someone.

Card: What I enjoy outside code

The creative side of things.

Graphic design, sketching ideas, experimenting with layouts, and occasionally spending longer choosing a font than I planned to.

SECTION 04 — HOW I THINK

Section heading

A few things I strongly believe in

Principle 01

Make it work before making it fancy.

A good-looking project is great. A good-looking project that actually works is better.

Principle 02

Build for the person using it.

The feature makes sense to you. Does it make sense to the person using it for the first time?

Principle 03

Learn by getting your hands dirty.

Tutorials help. Building something yourself teaches you what the tutorial left out.

Principle 04

Good design isn't just decoration.

The way something works matters just as much as the way it looks.

SECTION 05 — WORK / PROJECTS

Use the existing project-card design. Keep only real projects and ensure each card links to a working case study or valid destination. Do not present mockup graphics as screenshots of live applications.

Project 01 — Her Saathi

Category: AI · Women's Safety · Geospatial Technology

Status: In development, unless repository evidence proves otherwise.

One-line description

Exploring how real-world information can help women make more informed decisions about their routes.

Description

Her Saathi started with a question: what if choosing a route involved more than just finding the shortest way to get somewhere?

I'm exploring a safety-focused mapping platform that brings together location data, environmental information, and reported incidents to help users compare routes.

The idea includes a dynamic safety map, route comparisons, and a way to interpret street-level observations. The challenge is making the information useful without presenting incomplete data as a guarantee of safety.

Features to describe, with accurate status labels

- Safety Intelligence Map: visualize relevant location and environmental signals.
- Route Comparison: explore alternative routes using travel time and available safety indicators.
- Street-Level Observations: investigate how images and computer vision could help identify environmental conditions.
- Evidence Aggregation: organize observations by location while considering their source and freshness.

Technologies

Potential stack discussed: Next.js · React · TypeScript · Python · FastAPI · PostgreSQL · PostGIS · OpenStreetMap.

Only show a technology as “used” if it is actually present in the project. Put planned or currently learning technologies under “Exploring” or omit them.

Case-study note

A map can look convincing even when the information behind it is weak. One of the hardest parts of this project is deciding what data deserves to be shown, how reliable it is, and how to explain its limitations.

Do not claim that the platform guarantees safe routes, predicts danger with proven accuracy, or uses verified real-world data unless the implementation and sources substantiate that claim.

Project 02 — StudyOS

Category: AI · Education Technology · Productivity

Status: In development, unless repository evidence proves otherwise.

One-line description

A personal workspace for studying, tracking progress, and keeping academic life organized.

Description

StudyOS is my attempt to make studying feel less scattered.

I'm developing a personal academic workspace that brings together course organization, study planning, progress tracking, and AI-assisted learning.

The broader idea is to create one place where I can keep track of what I'm learning, what needs attention, and what I should work on next.

Features to describe, with accurate status labels

- Course and subject organization.
- Study goals and progress tracking.
- Academic planning and task management.
- An AI tutor designed to answer questions with supporting sources.
- A workspace for managing study activities.

Technologies

Potential stack discussed: Next.js · TypeScript · Tailwind CSS · Supabase.

Only list technologies that are actually used in the current implementation.

Personal note

I wanted a study system that could work around the way I learn, instead of making me maintain yet another disconnected list of tasks.

Project 03 — MentorEdge

Category: EdTech · Research · Mentorship

One-line description

Connecting students with mentors and opportunities to explore research.

Description

Research can feel difficult to navigate when you're just getting started. MentorEdge is built around making that journey more approachable by helping students connect with mentors, find guidance, and explore research opportunities.

The platform's focus includes mentor matching, research guidance, grant guidance, and building a wider network of people working on research.

Features

- AI-assisted mentor matching.
- Research guidance.
- Grant guidance.
- Access to a broader mentoring network.

Tags

EdTech · Research · Mentorship · AI

Attribution boundary

Previous context establishes involvement in the concept, branding, and launch-related material. Inspect the repository and any available project records to establish Diya's actual role. Do not claim she personally implemented the whole platform. If her contribution is primarily branding, design, or product work, make that clear.

Project 04 — Only if there is another real project

Do not leave the current `[PROJECT NAME]` placeholder. If a fourth real project exists in the repository, create a card based on its actual implementation. Otherwise remove the card rather than inventing a project.

Each project card should ideally include:

1. Project name and one-sentence explanation.
2. Status: In development, Prototype, or Completed.
3. Diya's actual contribution.
4. Technologies used.
5. Real screenshot.
6. GitHub link if available.
7. A case study covering one real technical challenge and how it was approached.

SECTION 06 — TOOLBOX

Keep the existing visual category cards, but do not represent every technology as an advanced skill. Split the display into “Working with” and “Currently learning” where practical.

Languages

Potential list: Python · JavaScript · TypeScript · C · C++ · SQL

Only include languages Diya can reasonably discuss and use. Do not imply equal proficiency.

Frontend

HTML · CSS · JavaScript · React · Next.js · Tailwind CSS

Backend

Node.js · Express.js · REST APIs · Python · FastAPI

Some may be in the learning roadmap. Keep only technologies actually used in working implementations in the primary skill list.

AI / ML

LLM APIs · Prompt Design · AI Integration · Python for Data Processing

Possible “Exploring” tags if accurate: OpenCV · PyTorch · YOLO.

Data

PostgreSQL · Supabase · MongoDB · SQL

PostGIS is relevant to the geospatial project if implemented.

Tools

Git · GitHub · VS Code · Vercel · Docker

Keep only tools used in practice.

Hardware / IoT

Arduino · Sensors · Embedded Systems

Include only if Diya has personally used the relevant hardware. Otherwise remove this category or mark it as an interest.

Design

Graphic Design · UI Design · Visual Composition · Canva · Figma · Adobe Creative Tools

List specific Adobe applications only if actually used.

SECTION 07 — THE SKETCHBOOK / CREATIVE WORK

Section title

The Sketchbook

Subtitle

A little less code, a little more colour.

Use genuine artwork and designs Diya has created. Suitable categories based on her known interests and event work:

Gallery 01 — Event Posters & Visuals

Potential work to check for: CryptNite promotional material, SDG Club event posters, Engineers' Day visuals, Mystery Rooms promotional material.

Caption: Event graphics · Poster design · Visual communication

Include only work she personally created or contributed to, and accurately state the contribution.

Gallery 02 — Branding & Identity

Potential work to check for: MentorEdge branding and launch graphics, SDG Club promotional identity work, personal design experiments.

Caption: Brand identity · Typography · Colour studies

Gallery 03 — Digital Experiments

Show actual personal design experiments, illustrations, or visual explorations.

Caption: Digital art · Composition · Experiments

Gallery 04 — Interface Design

Show actual UI concepts or interface designs beyond the implemented project screenshots, if available.

Caption: UI design · Layouts · Interface experiments

Gallery card examples

- CryptNite 2026 — Event identity · Cybersecurity · Promotional design
- MentorEdge — Branding · Digital graphics · EdTech

Do not invent clients, commissions, brand projects, or completed design work. Personal experiments are valid if labelled honestly. Remove empty or duplicate placeholder cards if no genuine asset exists.

SECTION 08 — LEADERSHIP / PLACES I'VE BEEN, TEAMS I'VE LED

Use the existing ticket-style layout.

Card 01 — SDG Club

Organization: SDG Club, Manipal Institute of Technology Bengaluru

Role: President

Period: Use actual appointment dates. 2026–2027 is only a tentative label if it matches the real term.

Description

As President of the SDG Club, I'm working on building a more visible technical community on campus. My focus is on creating opportunities for students to learn, collaborate, participate in competitions, and work on projects that connect technology with real-world problems.

Tags

Leadership · Team Coordination · Technical Community

Card 02 — CryptNite 2026

Event: CryptNite 2026

Role: Event Coordinator

Organizer: MIT Bengaluru SDG Club

Category: National Cybersecurity CTF

Description

CryptNite was a national cybersecurity Capture the Flag event organized at MIT Bengaluru. I worked on event coordination and the planning surrounding the competition, which included online qualifiers and an on-campus final.

The event was designed to bring students together around cybersecurity challenges, problem-solving, and hands-on technical competition.

Event details

- Prize pool: ■1,00,000.
- Format: Online qualifiers followed by an on-campus final.
- Team size: 3–4 members.

Do not add unverified participant numbers or results.

Tags

Cybersecurity · Event Coordination · CTF

Card 03 — Technical Events & Community Building

Organization: MIT Bengaluru SDG Club

Role: Event Planning & Coordination

Description

I've also worked on planning technical activities and student-facing events, from cybersecurity competitions to workshops, hackathons, and interactive campus experiences.

What I enjoy most is taking an idea from a discussion to something people can actually participate in.

Tags

Event Planning · Collaboration · Community Building

Card 04 — Research & Technical Exploration (optional)

Use only if this reflects current activity.

Description

Exploring research questions around blockchain, identity, and cybersecurity while learning how to turn technical ideas into structured, testable work.

Research topics previously explored: decentralized identity using verifiable credentials and cryptography; threat validation using blockchain.

Do not describe either as a published paper unless publication is verified. Remove this card if it would overstate current activity.

SECTION 09 — CURRENTLY EXPLORING

Heading

Currently Exploring

Terminal content

~/currently

$ cat learning.log

01 → Full-stack development

02 → AI integration & tool use

03 → Geospatial systems

04 → Better project architecture

05 → Design systems

// build, test, learn, repeat.

$

Keep only topics Diya is actively studying now.

Sticky note 01

building → something useful, one feature at a time

Sticky note 02

reading → docs, debugging threads, and the occasional research paper

Alternative shorter notes:

- next up: make the current project better
- currently learning: how to build things properly

SECTION 10 — CONNECT

Section label

07 — CONNECT

Main heading

Let's build something real.

Description

I'm always happy to connect with people who enjoy building things, solving problems, or exploring new ideas.

I'm particularly interested in software development internships, technical collaborations, and opportunities to learn from people working on interesting projects.

Contact card

- Email: use the real email already configured in the repository; if none exists, leave a clear configuration item for Diya to fill.

- GitHub: use the real profile URL if available.
- LinkedIn: use the real profile URL if available.
- Portfolio: use the deployed URL once available.

Do not fabricate email addresses, usernames, or URLs. Ensure links are clickable only when valid.

Footer signature

Diya Gupta ✦

Footer line

Thanks for making it all the way down here :)

Alternative: Made with curiosity, code, and a little bit of design.

FINAL CONTENT AND QA CHECKLIST

Before finishing, verify all of the following:

- ■ All placeholder text has been removed or replaced with a clearly identified configuration value.
- ■ No fake project, feature, metric, award, publication, user count, or client has been added.
- ■ Project status is accurate: in development, prototype, or completed.
- ■ Diya's individual contributions are distinguished from team/platform work.
- ■ Her Saathi does not promise guaranteed safety or imply that unverified reports are confirmed facts.
- ■ Only real screenshots are presented as screenshots of actual applications.
- ■ The Sketchbook uses genuine creative work or intentional empty states.
- ■ Technologies are separated into actual experience versus learning/exploration where needed.
- ■ Email, GitHub, LinkedIn, and other links are real and functional.
- ■ Mobile and tablet layouts still work.
- ■ Navigation links, cards, animations, and project links work.
- ■ Text is readable and fits the current design.
- ■ The existing visual identity has been preserved.
- ■ Final response summarizes changed files and lists any details Diya must still provide.

Overall tone: specific, warm, lightly playful, honest, and human. It should read like a real computer science student who builds projects, likes design, and is learning through experience — not like AI-generated personal-brand copy.
